

Dear Parents/ Guardians

Since 2018 scientific vaccine experts have been reviewing mounting evidence that a single dose of HPV vaccine is sufficient for full protection and have advised a change in the schedule from 2 doses to one dose of HPV vaccine.

As your child has had a dose of HPV, they are deemed to be fully vaccinated, so do not require and will **not** be routinely offered another dose.

Please contact your immunisation team if you have any questions or concerns about this.

Yours sincerely

Coventry & Warwickshire School Immunisation & Vaccination Service

Regards

Ann Russell
